

Registered Pursuant to the ACVM Act 1997 No.A8264

How ProCalf works

- Provides a scientifically researched blend of yeast, bacterial extracts and enzymes to ensure full utilization of liquid feed and aid in the early development of the Rumen.
- ProCalf brings about the establishment of beneficial microbe populations in the digestive tract for digestion of hard feed, pasture and calf milk.
- ProCalf now contains live microbes licensed from AgResearch.

RumenZyme Cobalt plus can be used where rennet is not required. ie after weaning or with whey based CMR.

Dose Rates (See container label for full information)

Newborns or new imports	5 mL initial dose
Calves on liquid feed	2 mL/head/day
Unthrifty or scouring calves	5-10 mL/head/day

“We could see a huge difference and treated calves even looked happier the whole time.”

Barry and Heather Scott,
Field Trial South Canterbury

“ProCalf calves had a healthier appetite” (6.3% increased intake).”
