Fibre Characteristics

Fibre Type	Description	Specific Gravity	Sensitive to	Resistant to	Heat Reaction	Strength & Elongation
Polyester	Continuous Filament	1.38	Alkalis, phenolic compounds, sulfuric acid	Most organic & mineral acids, organic solvents, bleaches & oxidizing agents	Softens 228°C, Melts 255°C	Equivalent wet/dry strength ratio. Elongation 35% at Break
Polypropylene	Continuous Filament	0.91	Sodium hypochlorite & some hot organic solvents. Very susceptible to sunlight but with suitable additives, loss of strength is retarded	Hot and cold acids like alkalis	Shrinks rapidly from flame. Curls & melts at about 165°C	High tenacity. Good recovery from stretch and elongation at break for film ropes is 25-30%
Cotton	Gossypium natural cellulose vegetable fibre	1.50	Mineral acids - sulfuric acid will decompose cotton. Alkalis will swell cotton	Organic solvents, alkalis and weak acids	Yellowes 120°C, decomposes 150°C. Supports combustion	Dry elongation: 20-25% extension, 75-100% recovery. Wet strength appears to increase slightly from dry strength
